PROFILE

I am an Automation and AI specialist focused on building practical solutions that improve efficiency and productivity. I have hands-on experience integrating AI technologies with workflow automation tools such as Power Automate, n8n, and RPA platforms. I enjoy designing end-to-end automation systems that bring together OCR, intelligent analysis, and smart notifications. With a strong full-stack development background in React, Node.js, and API integrations, I am able to take ideas from concept through to reliable, real-world deployment.

PROFESSIONAL EXPERIENCE

Automation Team Lead, *m365consult* 09/2025 – Present | Remote

- Partnered with HR and Marketing to identify and implement automation solutions that improve departmental efficiency
- Led automation projects ensuring timely, high-quality delivery while coordinating team efforts
- Delivered daily progress reports to executive leadership, highlighting achievements, challenges, and upcoming deliverables

IT Assistant, *Branded Communication Agency* 01/2023 – 04/2023 | Kitale, Kenya

- Create new pages on the company website using HTML, CSS & JavaScript
- Design Flyers, Adverts, mockups, and wireframes using Design tools, e.g, Adobe Suite tools, Canva, Figma, etc.
- Managing and maintaining the Database
- Engage users and gather feedback

EDUCATION

Degree Computer Science & IT, *The East African University* 2019 – 2024 | Nairobi, Kenya
Grade: Second Class Honors Upper Division

KCSE, *St.Anthoney's Boys High School* 2015 – 2018 | Kitale, Kenya
Grade: B-

PROJECTS

Healthbridge App 📄, <http://healthbridge-ai.netlify.app/> 01/2026 – 02/2026

Developed a comprehensive AI health assistant specialized on improving life for people facing greater risk of contracting Diabetes and Hypertension, with a clear focus on achieving the Sustainable Development Goals.

Tech Stack:

- MongoDB
- Chroma DB
- Python FastAPI framework for backend
- React + Vite
- Tailwind CSS

- Firebase for Google Auth

Intelligent Workforce Monitoring System | Trackabi - Automa

RPA - Power Automate, Multi-phase automation solution for productivity tracking and analysis

- Architected a comprehensive 5-phase automation system that monitors employee productivity through screenshot analysis, AI-powered summarization, and automated alerting
- **Phase 1:** Developed RPA workflow using Automa to automatically scrape and organize screenshots from Trackabi accounts into dynamically created OneDrive folders with timestamp-based naming conventions
- **Phase 2:** Implemented AI-powered analysis using General OCR and Automa AI to process screenshots, categorizing them as productive, unproductive, or neutral, generating structured JSON summaries of user activities
- **Phase 3:** Created Power Automate webhook flow to capture AI analysis submissions and automatically update corresponding SharePoint list items with productivity metrics
- **Phase 4:** Built comparison engine integrating employee self-reported activities with AI-generated summaries, calculating match percentages and generating accuracy reports through Automa AI integration
- **Phase 5:** Designed automated alert system using Power Automate switch actions and conditional logic to send adaptive card notifications to management when productivity match scores fall below 70% threshold
- Achieved end-to-end automation eliminating manual productivity tracking and enabling data-driven workforce management decisions

Adaptive Card Communication Automation System |

Trackabi API Integration,

Context-aware messaging system with intelligent scheduling

- Developed intelligent automation leveraging Trackabi Members API to deliver personalized adaptive cards based on individual employee schedules
- Implemented dynamic message scheduling that adapts to each user's configured work start and end times, ensuring timely communication delivery
- Integrated leave management system by consuming Trackabi's Leave API to intelligently suppress notifications for employees on approved leave
- Created scalable solution that automatically adjusts to schedule changes without manual intervention, improving employee experience and reducing notification fatigue

AI-Powered Candidate Shortlisting System | n8n + OpenAI,

Automated recruitment workflow with intelligent candidate evaluation

- Built automated recruitment pipeline using n8n to streamline candidate evaluation process for job applications submitted through Manatal ATS
- Implemented OpenAI Agents to analyze candidate resumes against specific job requirements, providing objective qualification assessments
- Developed scoring algorithm that generates percentage-based candidate ratings, enabling consistent and bias-reduced evaluation criteria
- Automated candidate grading and categorization workflow, significantly reducing time-to-shortlist and improving hiring efficiency
- Integrated seamlessly with Manatal API to trigger evaluations in real-time as applications are received

SKILLS

AI & Machine Learning

AI-powered analysis, Natural Language Processing, Computer Vision/OCR, Prompt Engineering, Agent-based AI systems

Version Control & CI/CD

Git, GitHub, CI/CD pipelines

Front-end

HTML5, CSS3, JavaScript, React.js

Back-end

Node.js, Firebase, PostgreSQL, API integration

Automation & AI Technologies

Power Automate, n8n, Automa RPA, OpenAI Agents, General OCR, Adaptive Cards, Webhook Integration

Platforms & Tools

SharePoint, OneDrive, Microsoft Teams, Trackabi API, Manatal API, MongoDB

Soft Skills

Attention to detail, Analytical thinking, Communication

Core Competencies

- | | |
|---|---|
| • Workflow Automation Design & Implementation | • AI/ML Integration in Business Processes |
| • API Development & Integration | • Process Optimization & Efficiency Enhancement |
| • Cross-platform Automation Solutions | • Full-Stack Application Development |

LANGUAGES

English

Fluent

Swahili

Native
